PROFESSIONAL SUMMARY

MCA graduate seeking an entry-level DevOps / Cloud Engineer role, with hands-on project experience in Linux, Git, Docker, GitHub Actions, Jenkins, AWS EC2, Terraform, Ansible, Kubernetes, Prometheus and Grafana. Built CI workflows, containerized applications, practiced infrastructure as code and configuration management, and deployed a portfolio application to a local kind Kubernetes cluster. Interested in contributing to reliable automation and learning from an experienced engineering team.

TECHNICAL SKILLS

Linux & scripting: Linux fundamentals, Bash fundamentals, Python

Version control: Git, GitHub, branching, merging, pull requests

Containers & CI/CD: Docker, Dockerfiles, Jenkins, GitHub Actions, Nginx

Cloud & infrastructure as code: AWS EC2 deployment practice, Terraform, S3 remote-state integration

Configuration management: Ansible, YAML playbooks

Kubernetes & monitoring: Kubernetes, kind, Deployments, Services, readiness probes, PVCs, Prometheus, Grafana

Frontend tools: React, JavaScript, Vite

HANDS-ON PROJECTS

Project 1 — DevOps Docker Lab

Stack: Docker, Python, Git, GitHub Actions

- Containerized a Python application using Docker and practiced image builds, port mapping and application health checks.
- Added automated checks and Docker image-build validation using GitHub Actions.

Project 2 — AWS Deployment Lab

Stack: AWS EC2, Linux

- Practiced deploying and managing an application on AWS using EC2-based deployment workflows.
- Worked through Linux server access and application deployment verification.

Project 3 — Jenkins CI/CD Lab

Stack: Jenkins, Docker, Linux, Git

- Built and tested a Jenkins pipeline using a Jenkinsfile, with controller/agent execution and Docker integration.
- Reviewed pipeline logs and troubleshot failed stages during CI/CD practice.

Project 4 — Terraform Infrastructure

Stack: Terraform, AWS, S3

- Practiced Infrastructure as Code using reusable Terraform configuration.
- Integrated remote state with Amazon S3 as part of the project workflow.

Project 5 — Ansible Server Configuration

Stack: Ansible, YAML, Linux

- Created repeatable Linux configuration workflows using Ansible playbooks and YAML.
- Practiced inventory-based configuration and repeatable setup tasks.

Project 6 — Kubernetes Monitoring & Storage

Stack: Kubernetes, Prometheus, Grafana

- Worked with Kubernetes workloads, Deployments, Services, readiness checks and persistent-volume claims.
- Practiced monitoring with Prometheus and Grafana and persistent-data recovery/verification.

Project 7 — Personal Portfolio DevOps Capstone

Stack: React, Vite, Docker, Nginx, Jenkins, Kubernetes, kind

- Built a responsive React/Vite portfolio and packaged it in a multi-stage Docker image, with Nginx serving the production frontend.
- Verified Jenkins build #9 passed dependency installation, ESLint, production build and Docker image build.
- Loaded the image into the existing kind cluster; verified rollout success, 2/2 ready replicas, and the /health endpoint returning HTTP 200 through the Kubernetes Service.
- Documented the workflow in GitHub; CI image building and Kubernetes deployment remain separate steps.

EDUCATION

Master of Computer Applications (MCA) — KLE Dr. M. S. Sheshgiri College of Engineering and Technology, Belagavi / KLE Technological University, Hubli | 2023–2025

Bachelor of Computer Applications (BCA) — KLE RLS Institute, Belagavi / Kitturu Rani Channamma University, Belagavi | 2020–2023

Senior Secondary (12th) — Alva's Pre-University College, Karnataka State Pre-University Board | 2018–2020

SSLC (10th) — Excellent Public School, Lokapur — CBSE | 2018

Languages: English, Kannada, Hindi

Project experience represents hands-on learning and portfolio work, not paid employment. Confirm exact institution naming before submitting.
